

Making the Best Cropping Choices

Personalised Cropping Decisions Workshop

Save time and money over the traditional 'sow and see' approach, by simulating different crop types, management decisions and seasonal effects to answer the following...

*How do you know if you're growing the best crop you can?
Is there something better you should try?*

Compare the results of different crop decisions across a range of seasons. Explore the likely outcomes from changing fertiliser rates, planting dates, seed varieties, and other management factors.

Which cropping system is best for you – what are the effects on following crops?

Can you choose a cropping system that gives you greater long-term profitability? Will growing a cash crop now, cost you in the long run? Get the answers to these and other questions.

The "Personalised Cropping Decisions" workshop is a guided self-learning process helping you make personalised cropping decisions with hands-on training using the decision-support tools [CropARM](#) and [RotationARM](#) and peer-to-peer learning.
